[SEF Search Engine Friendly](#)

The aim of this article is to provide you a basic overview to **SEF (search engine friendly URL's)** and to outline the benefits of using SEF for the [Joomla Open source content management system \(CMS\)](#)

SEF - Search engine friendly URL's

By default the [Joomla](#) SEF functionality is not enabled which basically mean's the url's displayed via your web site will look like this [http://www.jourdomain.com/index.php?option=com_weblinks&Itemid=23.](http://www.jourdomain.com/index.php?option=com_weblinks&Itemid=23)

There are a number of disadvantages in SEO terms for not enabling search engine friendly URL's which include.

[Joomla!](#)

[Joomla](#) is recognized as

one of the most popular open source content management systems (CMS) on the internet today and is the ideal open source solution for individuals, small business or large enterprises who wish to take advantage of the benefits Joomla can bring.

Some of the benefits Joomla has to offer include the following

1) Active Joomla Support Community

Joomla is growing at a fast pace with one of the most active development communities in the Open Source arena who provide support via the official Joomla forum where you can contribute or post questions which get answered by members of the community.

The forum currently has over 10,000 active members and there is always someone willing to help if you have a question.

2) One going development for Joomla

The core Joomla development team are very active releasing new and enhanced versions of the content management system. Over the past few months the core development team have released over 5 news version releases of Joomla to the community based on enhancements, security fixes and more. This mean's you not only do you get a great CMS but you also have the knowledge that something new and exciting could be released making it even

better.

3) Joomla Components & Modules

Due to the popularity and flexibility of Joomla's modular architecture you find a wide range of components and associated modules which are being developed by various 3rd party team's and can be downloaded for free under GPL or purchased for a small price to bring additional functionality to your web site. This is one of the big benefits and selling points Joomla has to offer, the fact that you can find nearly any component or module which meets your requirements and then just download and plug it into your content management system.

4) Joomla

Templates

As with components and modules you also have number of web designers who develop and design Joomla templates which can transform the look and feel of your web site with a click of a button. All you have to do is find a template you like, download it and apply it to your content management system (CMS). Many of the templates come with predefined module positions so you can display module's in various different positions.
